SUMMARY

BIT graduate currently pursuing a Master's in Information Technology with Data Analytics at the University of the West of Scotland. Flutter developer transitioning into data analytics, with a portfolio of reproducible Python/SQL projects covering ETL pipelines, exploratory analysis, statistical testing, KPI reporting, RFM segmentation, and interactive dashboards. Focused on turning imperfect datasets into clear metrics, defensible insights, and recommendations decision-makers can act on. UK-based and open to Data Analyst roles.

EXPERIENCE

Applied Data Analytics Projects

2026

Independent Portfolio | United Kingdom

- Completed ten reproducible analytics projects spanning retail, ecommerce, customer retention, field operations, education, rentals, and music catalogs.
- Built ETL pipelines, relational SQLite models, reusable SQL queries, statistical analyses, KPI reports, Jupyter notebooks, pytest coverage, and Streamlit dashboards.
- Communicated findings with business context, limitations, and action-oriented recommendations suitable for stakeholder review.

Flutter Developer

Mar 2025 - Oct 2025

Thulo | Lalitpur, Nepal · 8 months

- Developed cross-platform mobile experiences with Flutter in a product-focused technology environment.
- Applied structured debugging, reusable component design, and user-centered problem solving.
- Extended this software-engineering foundation into reproducible data workflows and analytical products.

Flutter Developer

Mar 2024 - Mar 2025

Gaaubesi Logistics | Kathmandu, Nepal · 1 year 1 month

- Contributed to mobile application development in a logistics-focused business environment.
- Worked with product requirements and application data flows to support usable digital experiences.

EDUCATION

University of the West of Scotland

Jan 2026 - Jan 2027

Master's Degree, Information Technology with Data Analytics · Currently studying

KIST

2021 - 2024

Bachelor in Information Technology (BIT)

SKILLS

Analysis & Programming: Python, pandas, NumPy, exploratory data analysis, data cleaning/validation, feature engineering, statistical testing

SQL & Data Workflows: SQL, SQLite, relational modeling, ETL pipelines, KPI development, RFM segmentation, data quality checks

Visualization & Tools: matplotlib, seaborn, Streamlit, Plotly, Jupyter, dashboard design, business storytelling, Git/GitHub

Software Background: Flutter, Dart, cross-platform development, reusable components, testing and debugging

SELECTED ANALYTICS PROJECTS

Portfolio projects use synthetic data with reproducible pipelines, documented assumptions, and quantified business metrics.

Sales Insight Workflow

github.com/sovakushwaha/sales-insight-workflow

- End-to-end workflow across 4,200 validated sales line items: source-quality checks, relational joins, feature engineering, KPI reporting, and SQLite outputs.
- Measured INR 81.05M synthetic net revenue and 32.9% margin; translated category, regional, channel, and discount patterns into five business recommendations.
- Tech: Python, pandas, SQL, SQLite, pytest, matplotlib, seaborn

Ecommerce Transactions EDA

github.com/sovakushwaha/ecommerce-transactions-eda

- Cleaned and analyzed 6,000 synthetic transactions for revenue, returns, seasonality, shipping performance, and customer satisfaction.
- Applied chi-square, Kruskal-Wallis, Mann-Whitney U, and Spearman correlation; Electronics drove 42.9% of net revenue while Fashion had a 20.4% return rate.

Purchase Behavior & RFM Segmentation

github.com/sovakushwaha/purchase-behavior-analysis

- Processed 6,500 synthetic orders and built RFM scoring across 2,200 customers with reusable Python modules and SQLite (\$1.05M revenue; \$241 AOV; 52.3% repeat rate).
- Identified Champions as the largest value segment (~\$652.9K from 215 customers).

Subscription Churn Signals

github.com/sovakushwaha/customer-churn-eda

- Analyzed retention across 2,200 synthetic subscribers; quantified \$21.9K monthly recurring revenue at risk using point-biserial correlation and bias-corrected Cramer's V.
- Monthly contracts showed 28.8% churn versus 1.9% for two-year contracts.

Field Service Operations Analytics

github.com/sovakushwaha/field-service-operations-analytics

- Designed a normalized SQLite warehouse and views for 3,200 work orders, 48 technicians, six service categories, and five regions.
- Measured SLA compliance, first-time fix rate, utilization, and margin; delivered six charts plus an interactive Streamlit dashboard.

Student Performance Analytics

github.com/sovakushwaha/student-performance-analytics

- Explored study habits, attendance, sleep, and outcomes across 650 synthetic students with a reproducible generation/analysis pipeline and five visual findings.
- Subject mastery and attendance were the strongest descriptive separators of final outcomes.

Retail Sales Pipeline

github.com/sovakushwaha/retail-sales-pipeline

- Built a portable CSV-to-SQLite ETL pipeline with missing-price handling, revenue feature engineering, relational schema constraints, and reusable SQL analysis.
- Presented product, country, category, customer, and monthly performance in a focused Jupyter notebook.

ACTIVITIES

- **SovaVerse (YouTube)** - Tutor and creator covering Data Science, AI, and Machine Learning; documents learning in public and explains technical concepts accessibly (youtube.com/@sovaVerse01).
